

THE GATE

The entrance gate is equipped with a Spectrum Telephone Entry System (TES). It is among the most powerful, flexible, intercom access controlled system available. Also, it is one of the most easily operated systems available. A state of the art security system operates through ADT.

RESIDENT ACCESS

There are two (2) methods of access available for residents:

1. Remote Control Device.
2. Control Panel Keyboard.

VISITOR ACCESS

Visitor access is by control panel keyboard and intercom phone system to a specific resident.

OPERATION

RESIDENTS

Remote Control Device. These devices are available for purchase in the office at the Clubhouse.

VISITORS

1. Visitors use the control panel and follow listed instructions to find the Special Directory Code Number adjacent to the name in the resident Directory. When this code number is entered, an intercom connection is made to the resident's telephone. This allows the resident to speak to the visitor. The gate is activated by pressing the number nine (9) key on the resident's telephone.
2. If you wish to deny entrance to the visitor, hang up the telephone and the control panel resets. In order for the visitor entrance system to work, your telephone number must be submitted to the Office at the Clubhouse and entered into the system. Resident's telephone numbers are never displayed on the control panel and are not available to visitors.
